EDUCATION

Georgia Institute of Technology

Atlanta, Georgia

Bachelor of Science in Computer Science, Highest Honors | GPA: 3.65/4.0

August 2023 – December 2026

Concentrations: Information Internetworks & Artificial Intelligence

Coursework: Data Structures & Algorithms, Design & Analysis of Algorithms, Object-Oriented Programming, Objects & Design, Systems & Networks, Database Systems, Computer Networking, Mobile Apps & Svcs, Information Security

EXPERIENCES

Software Engineer Intern

May 2026 – Present

Adobe

San Jose, California

- Engineered a Splunk log browser for an internal AEM Cloud Service platform used by 2,000+ Adobe employees, letting support engineers query and open logs across 6 tiers without writing raw search queries.
- Fixed a production memory crash in a Scala backend by rewriting log exports to stream to disk instead of buffering multi-gigabyte files in memory, verified by cleanly delivering 1.77GB over 6 files in 3 minutes with zero timeouts.
- Built an AI diagnostic agent that autonomously analyzes AEM thread dumps and Splunk logs to identify the root cause of pipeline failures and eliminate hours of manual log review.

Software Engineering Co-op

Jun 2025 – Aug 2025, Jan 2026 – May 2026

Delta Air Lines

Atlanta, Georgia

- Led the transition of 70+ ALPA iCrew Admin users from shared logins to individual, role-based credentials to strengthen IT policy compliance and reduce unauthorized access risk across internal crew systems.
- Designed a scalable Delta-ALPA data transfer system that exposed Oracle database views through a REST API, replacing a manual process and improving operational data availability for 500+ pilot scheduling users.

Technical Project Manager

January 2025 – December 2025

GT WebDev Club

Atlanta, Georgia

- Directed a team of 12 developers in building a MERN-stack Lost & Found app for GT campus students.
- Launched Roomify AI to generate room layout and color suggestions from photos, tested by 150+ students.

Software Engineering Intern

August 2024 – December 2025

Electronic ARTrium Research Team, Georgia Institute of Technology

Atlanta, Georgia

- Prototyped L3Harris-sponsored robot dog features using CNN-based image and audio recognition to enable real-time perception, event detection, and interactive K-12 STEM outreach during live demonstrations.
- Developed a MySQL schema and Python pipeline to track player progress via barcode scans, while contributing to LIDAR-based occupancy sensing for a 4-section exhibit attended by 1,200+ visitors.

Software Engineering Intern - AI/ML

September 2023 – May 2024

CreateLabs, University of Georgia

Athens, Georgia

- Implemented a YOLOv5 object detection pipeline trained on 1,000+ labeled tool images to improve part identification accuracy and reduce manual inventory checks by 75% in manufacturing workflows.
- Wrote Klipper G-code macros to automate E3D Toolchanger head movements, cutting delays from filament swaps.

PROJECTS

ApplicationHQ | *Next.js, React, TypeScript, Spring Boot, PostgreSQL*

- Architected and deployed ApplicationHQ, a full-stack job tracker, on AWS with a Next.js/React/TypeScript frontend and a Java Spring Boot REST API backed by PostgreSQL.
- Delivered a recruiting dashboard tracking applications across 7 pipeline stages (saved, applied, OA, interview, offer, rejected, withdrawn), secured by Clerk authentication.

Business Supply Express | *MySQL, React*

- Modeled a normalized MySQL database with 21 stored procedures and 6 views for a delivery logistics platform.
- Integrated a React frontend with the database for route scheduling, inventory tracking, and operational analytics.

WanderSync | *Android, Java, Firebase*

- Created an Android trip planning app in Java, storing 600+ Firebase entries synced live across collaborators.
- Shipped a Travel Community feature and vacation calculator using 2 design patterns over 4 sprints.

SKILLS

Languages: Python, Java, TypeScript, JavaScript, Scala, C++, C, SQL, Kotlin

Web: HTML, CSS, React, Next.js, Spring Boot, Node.js, Express, Tailwind CSS, Flask, Clerk, REST APIs

AI/ML: TensorFlow, PyTorch, OpenCV, YOLOv5, scikit-learn, NumPy, Pandas

Cloud & DevOps: AWS, Docker, Git, GitHub, CI/CD, Jenkins, GCP, Azure

Databases & Tools: PostgreSQL, MySQL, Oracle, MongoDB, Firebase, Splunk, Postman, Jupyter, Linux/Unix, JUnit

Certifications: AWS Certified Cloud Practitioner (CCP), AWS Certified AI Practitioner (CAIP)
